

DATASHEET CONFIX

SECURITY CONFIGURATION BASELINE & HARDENING PLATFORM

Security, compliance, and IT operations teams face increasing pressure to ensure that their systems remain resilient against evolving cyber threats while meeting stringent regulatory requirements.

CONFIX is an Enterprise Security Configuration Assessment (SCA) and Hardening platform designed to address these challenges head-on. Built with flexibility and scalability in mind, CONFIX empowers organizations to automatically assess, enforce, and monitor security configurations across diverse IT environments—whether on-premises, in the cloud, or in air-gapped networks.

Focusing on industry-recognized CIS Benchmarks and customizable organizational templates, CONFIX delivers a comprehensive SCA solution. Organizations can rapidly identify configuration gaps, enforce standardized baselines, and generate audit-ready reports with ease. With robust reporting, seamless integration, and distributed deployment capabilities, CONFIX provides the visibility, control, and assurance required for today's dynamic enterprise environments.

KEY BENEFITS

- **AUTOMATED BASELINE CONFIGURATION**
Rapidly assess and enforce security configuration baselines across diverse IT assets, ensuring compliance with global standards such as CIS Benchmarks and custom organizational policies.
- **COMPREHENSIVE VISIBILITY**
Gain unparalleled insight into system misconfigurations, drift, and compliance status, with agent-based and agentless deployment options.
- **FLEXIBLE DEPLOYMENT**
Designed for both distributed and centralized environments, supporting on-premises, hybrid, and air-gapped networks.
- **AUDIT-READY REPORTING**
Generate detailed, auditor-friendly reports in PDF and CSV formats for every scan and remediation cycle.
- **SEAMLESS INTEGRATION**
Import scan results, penetration test findings, and threat intelligence from third-party tools for unified security management.

» INTEGRATED SECURITY & COMPLIANCE

- ## CORE CAPABILITIES:

- Scan and assess IT assets—including servers, network appliances, databases, and containers—against predefined or custom security baselines.
- Supports agent-based and agentless scanning.
- Covers major platforms: Windows, Linux, VMware, Active Directory, network firewalls (Palo Alto, Fortinet, Juniper), databases (SQL, PostgreSQL, MongoDB), and Kubernetes.

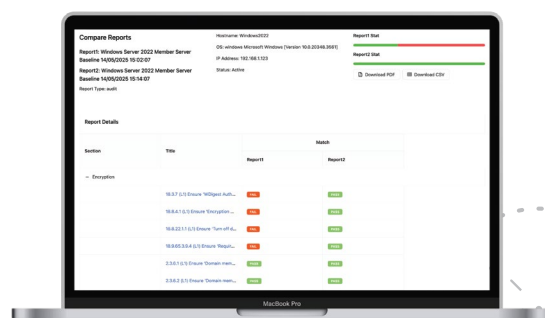

- Deploy recommended configuration changes based on assessment findings.
- Supports backup and restore scripts to ensure safe configuration changes.

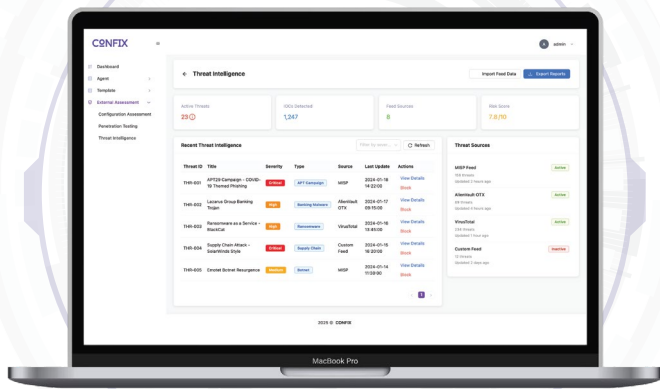

- Monitor for configuration drift and unauthorized changes.
- Compare scan results over time to identify and investigate changes.

- Use or adapt ready-made templates based on CIS, or organizational policies.
- Templates include checks, remediation, backup, and restore procedures.

- Supports distributed installation for large or segmented organizations.
- Operates in isolated or air-gapped environments, ensuring security and compliance even in sensitive deployments.

- Single-pane-of-glass dashboard for all scan results, compliance status, and remediation activities.
- Import and correlate external scan results, penetration tests, and threat intelligence for holistic security management.

KEY INTEGRATION

- **CSV Data Import**
Import scan and assessment results from other tools and sources.
- **Threat Intelligence**
Integrate external vulnerability and threat feeds for proactive risk management.
- **Penetration Test Results**
Import and correlate penetration testing outcomes for comprehensive compliance tracking.

INDUSTRY-LEADING CAPABILITIES

Supports Major IT Environments:

- Windows Server (2016, 2019, 2022+)
- Red Hat
- Ubuntu
- CentOS
- Oracle Linux
- VMware ESXi
- vSphere
- Palo Alto
- Fortinet
- Juniper
- Active Directory
- Exchange Server
- Databases: SQL Server, PostgreSQL, MySQL, MongoDB
- Kubernetes and containerized environments

Compliance & Standards:

- CIS Benchmarks
- Custom organizational policies

Scalable Architecture:

- Suitable for both small teams and large enterprises
- Distributed agent deployment for branch offices or critical infrastructure

REPORTING & DASHBOARD

Comprehensive Reports:

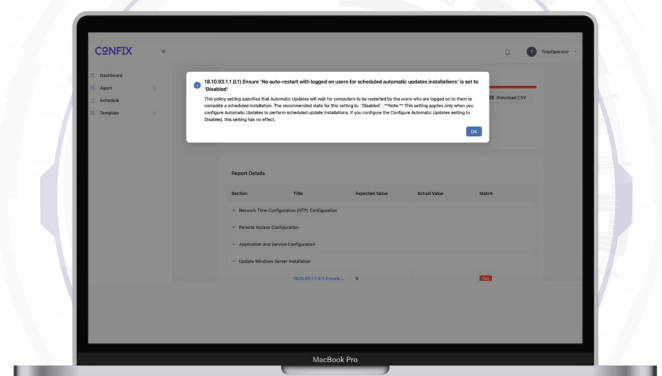

- Executive summaries, technical findings, remediation steps
- Before-and-after comparisons for every baseline enforcement cycle

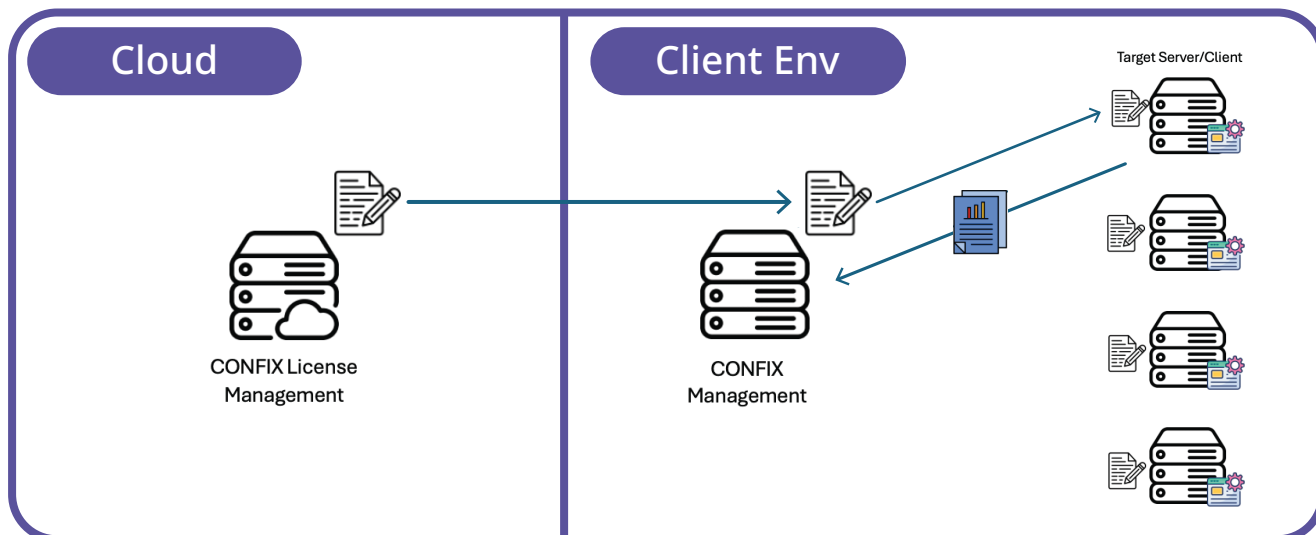

Data Export:

PDF and CSV report generation for audits and compliance reviews

Drift Comparison:

Visualize configuration changes and compliance trends over time

ARCHITECTURE & DEPLOYMENT

Flexible Installation:

- Agent-based and agentless options
- Distributed deployment for remote or segmented networks
- Central management server (on-premises or cloud-ready)

Security & Privacy:

- All communication is encrypted
- Privacy by Design and Privacy by Default principles built into system architecture
